

## **CLEAN FUEL SOURCE MOBILE ANAEROBIC DIGESTER PILOT PLANT - STANLEY CONSULTANTS**

Minneapolis, MN

### **CLIENT**

Stanley Consultants  
Minneapolis, MN

### **COST**

\$2,500,000

This project consisted of a four-month pilot trial in a mobile anaerobic digestion unit in order to prove the concept of a patent that Stanley Consultants owns on a process that produces biogas, a mixture of natural gas and CO<sub>2</sub>, from the stillage co-product produced at grain-based ethanol facilities. Utilizing feedstock material taken directly from the production stream at an operating corn-based ethanol plant in Minnesota, thin stillage was processed into biogas, compost, liquid fertilizer and clean water for recycle back to the front of the ethanol plant.
