To Whom It May Concern:

I highly recommend SiTESPAN as a contractor, owner's rep, and organizational consultant. They are technical minded, detail oriented and client focused.

I have been able to involve SiTESPAN in several of our facilities across the country. My interaction with SiTESPAN began in 2013 when we worked together on miscellaneous projects for US Bank in Olathe, Kansas. Since then, I have engaged SiTESPAN on projects in Portland, Oregon, Minneapolis, Minnesota and again in Olathe, Kansas.

US Bank has used the SiTESPAN team for a variety of services; from design and construction management, to owner's representation. The types of projects involve; electrical infrastructure upgrades, force protection, building shell hardening, and general construction. On each project SiTESPAN has consistently delivered more scope and value than required.

The SiTESPAN team has successfully executed work and represented the needs of US Bank through hard work and diligent knowledge of our industry. SiTESPAN is continually striving to deliver creative solutions to our evolving needs. I have no hesitation in recommending SiTESPAN for any future opportunities. Please contact me if you feel that I might be of further assistance to you.

Sincerely,

Randy Starr  
Facility Chief Engineer  
US Bank Corporation
