

Our Work

Project/Client Name: Stratton VA Medical Center - Data Center Renovation

Location: Albany, NY

Role: Owner's Representation

Scope of Work

During the design phase of the project the Government determined procurement of a new design team was necessary. Tim Everson, President of **SITESPAN**, introduced and helped negotiate the design contracts for Bell/Knott & Associates and Gibbens, Drake, Scott Engineers as the new design team.

The project consisted of a complete renovation and expansion of the existing, operating data center, without interrupting operations. This Data Center maintains records for all of the Veterans Hospitals in the North East region. This project required new Cooling and Power installations, reconfiguration of the data processing servers, asbestos abatement, and a complete renovation of the space. All of this accomplished while maintaining zero down-time.
